

Long - travel - modules

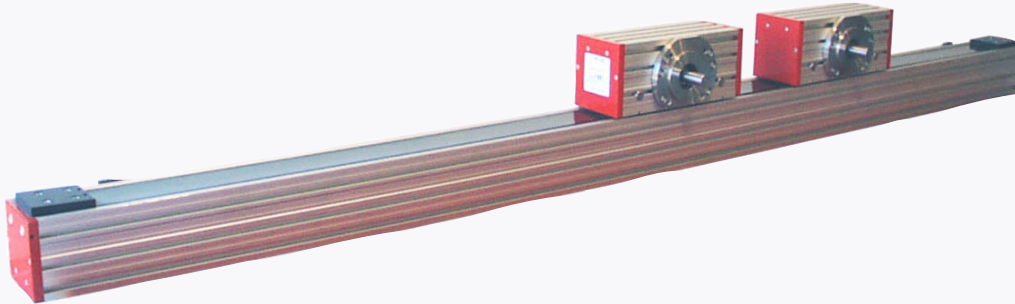

- This product group is available in the following sizes:

LTM-40
LTM-60
LTM-80
LTM-100
LTM-150

- This module type has been especially designed for long travel distances.
- Due to its design the long travel module offers high positioning accuracy also for long travel distances.
- Several, also independently controllable drive units or blocks can be mounted on one module.
- The travel distance (=stroke) is produced according to the customer's needs.
- The long travel modules are suitable for reception of higher loads and torques also for parallel application.
- Additional stiffening elements e.g. for cantilevered constructions can be easily organized from the Isotec system profile program.
- Various accessories of the Isotec system profile technology (SPT) are available on a short-term basis.
 - e.g. • mounting angles, gusset plates
 - clamping units, thread rails, thread plates, joints, ...
(for connection with various substructures)
 - adjustable feet
- Long travel modules are also available in stainless version.
